NUMBER BOGGLE EXAMPLE

11	8	7	19
2	5	8	4
3	19	3	19
2	7	6	3

Moving from one square to another either horizontally, vertically or diagonally try and make the target value by adding and / or subtraction.

Example 1: $8 + 5 - 2 = 11$

Example 2: $7 + 6 + 3 + 3 = 19$

There are many combinations. Can you find them all. You can create a game for two: each person takes it in turns to find a "boggle". The winner is the player who finds the last one on the grid.

NUMBER BOGGLE - 1 -
