## MATHS PUZZLE BOOK VOLUME 9

= for keen puzzlers aged 9 to 105! =

This document is not connected to any organisation and there are no financial implications involved. This is me giving back to Society which has treated me well. This booklet can be printed in black and white or colour and it can be printed page by page if you do not want to print the whole document.

## COUNTING DOWN!

Make the total on the right - you do not have to use all the numbers.
You can only use the operations addition, multiplication, subtraction and division.

## ORDERING CARDS

By reading through the instructions put the numbers in the correct order.
Using playing cards or numbered cards will make it easier to solve. None of the numbers are in their actual positions. 1 cannot be the first card, 2 cannot be the second card and so on.

## A: 1234

The even cards are in the middle

## B: 12345

The first card is a multiple of the last card The third and fourth card equals 4 when added together

## C: 123456

5 is two places away from the 4 and two places away from the 1 When multiplied together the third and fifth cards equal 6 The first and last cards equal 7 when added together

## D: 1234567

5 is the result of multiplying the first and second cards together 3 is five places away from the 5
4 is 4 places away from the 6
7 is to the right of 1 but left of 6
The fourth card is double the second card

## E: 12345678

The fourth and the fifth card add up to 12
7 is six cards away from the 6
The first and fifth cards equal 20 when multiplied together
The 1 is between the 3 and 4
The fourth card minus the first card equals 3

## MEAL TIMES

The Oblong family, Mother, Father, two daughters and two sons have odd seating arrangements. The two girls do not sit opposite each other or next to each other. The same rules are followed by the two boys and the two parents. Create a seating plan which follows the rules. Are there different solutions?

## FENCES

A continuous fence has to be built in each field. The numbers indicate how many sides of the fence go around the space

OPTICAL ILLUSIONS

## CONSECUTIVE NUMBERS

The clues are the total of the consecutive numbers e.g. 456.
They may not be written in order e.g. 3456 could be written as 5346 or 3645 etc.

## BOBBLE MAZES

These type of mazes were created by a Russian mathematician about 60 years ago but they did not become popular. In my version you have to travel vertically and / or vertically from 1 to 10 . On your route you have to include all the values between 1 and 10 .

## QUESTION TIME

1. Find the value of the letters $A, B$ and $C \quad A 26+98 B+6 C 9=2368$
2. 4 ! means $1 \times 2 \times 3 \times 4=24 \quad$ What is the value of 7 !
3. There is 300 ml of oil in the small bottle. There is six and a quarter times as much in the big bottle. How much oil is in the big bottle?
4. Mathsie builds a square pen for a dog with each side measuring 4 m . Posts are placed 1 metre apart for the fence. How many posts are required?
5. Write in figures the number thirteen million, thirteen thousand, thirteen hundred and thirteen.
6. A piece of wire 36 cm long is bent into the shape of a rectangle. If the rectangle is twice as long as it is wide, what is the area?

## REFLECTIONS

The dark lines are double-sided mirrors. Colour in the reflections.

FIND THE VALUES
The letters A, B, C, D, E, F can have one these values: 1, 2, 3, 4, 5, or 6 . From the statements below work out the value of each letter.
li

$$
\begin{array}{cc}
D+B=10 & E \times C=D \\
B+E=11 & F+A=9 \\
C+D+A=E & B+D=7 \\
F-C=A & A \div E=E
\end{array}
$$

lii
$A+F=11$
$D \times B=F$
$C+B=E$
$A-E=C$

Iv
V
$A-D=C$
$12 \div B=F$
$B+E=6$
$\mathrm{F} \times \mathrm{C}=\mathrm{D}$
$E-A=B$
$C<F$

## THE FLANDERS WHEEL

 Place eight lettered counters on the wheel as shown. Now move them one at a time along the lines from circle to circle until the word FLANDERS can be correctly read round the rim of thewheel as at present, only that the F is in the upper circle now occupied by the N .

Of course two counters cannot be in a circle at the same time. Find the fewest possible moves.

Two puzzles created by Henry Ernest Dudeney (1857-1930)

GRASSHOPPERS QUADRILLE
The counters you place on the blue squares must change places with the different coloured counters on the pink squares in the least number of moves.

Moves are only horizontal or vertical.

The blue counters can only move RIGHT or DOWNWARDS and the pink counters can only move LEFT or UPWARDS.

Counters can jump over an opposition counter but there is no capture.
